

November 2007: Wind Simplicity receives the *Design Exchange Awards of Canada* for its wind turbines

Congratulations to Wind Simplicity (www.windsimplicity.ca) who just received the GOLD placement in the Engineering category for their Windancer turbines, judged by the Design Exchange Awards of Canada.

The Design Exchange awards (<http://www.designcanada.org/DXASubmissions07.pdf>) are Canada's only award program to judge design by results, balancing function, aesthetics and economic success. The Windancers wind turbines are equipped with ALXION STK alternators from 3KW up to 22 KW. Wind Simplicity kindly say that the ALXION STK alternators have been the nucleus of their innovative design.
